Summary

Full-stack engineer building agentic products. Shipped a paying Claude Code plugin (LaunchReel) and an MCP-native platform (Slates); at Aqueralabs I own backend performance, RBAC, and agent features.

Education

Sinhgad College of Engineering, BE in Information Technology (GPA: 7.97/10) 2021 – 2025

Technical Skills

Languages: TypeScript, JavaScript, Java, SQL
Frameworks: Next.js, React, Angular, Node.js, Spring Boot, Remotion, REST APIs, SSE
AI & Agentic: Claude Code, MCP, OAuth 2.1, LLM Agents, Agent Tools, AI Workflows
Data & Infrastructure: PostgreSQL, Supabase, OpenSearch, Redis, MongoDB, DynamoDB, Cloudflare, Vercel, Docker
Engineering: RBAC, Authentication, Caching, Performance Optimization, System Design, Git

Experience

Member of Technical Staff - 1, Aqueralabs April 2026 – Present

- **Owned filter execution performance**: redesigned the ranking and execution pipeline for deterministic results; cut manual filters from $\sim$**1.5–2 minutes to** $<$**1 second** and Prompt-based filters to **4–5 seconds**.
- **Built Ask Aquera from scratch**, a chat-first analytics workspace with SSE-streamed agent responses, conversational dashboard generation, and dynamic widgets.
- Designed **tenant-scoped RBAC** across **181 API routes and 31 MCP tools** (11 resources, 50 permission keys) with shadow-mode rollout to production.
- Integrated **5 micro-frontends** into the app shell and extracted shared dashboard components across Connections, Settings, Agent, MCP, and ETL.
- Built **schema and data-management infrastructure**: OpenSearch sync, field curation with human/LLM precedence, and safeguards against overwriting curated metadata.

Associate Software Engineer, LTI Mindtree July 2025 – April 2026

- Built **production Java/Spring Boot backend services**: REST APIs, business logic, and integration layers for enterprise applications.
- Built a **full-stack COE platform from scratch** (Spring Boot, React) with modular services and clean API design.

Projects

LaunchReel - AI Video Editor for Claude Code launchreel.tech

- Shipped a Claude Code plugin that edits talking-head videos and generates launch videos from a product's real repo: **81 installs, 3 paying customers**.
- Built a TypeScript monorepo: Remotion motion kit, **MCP server published to npm**, local Studio UI, and a Next.js billing/licence API on **Cloudflare Workers + D1**.
- Designed a **schema-validated generation harness**: models emit only JSON, and code checks trace every on-screen number to a user-supplied fact.

Slates - One Workspace for You and Your Agents (invite-only) slates.space

- Built an installable **PWA where AI agents** (Claude, ChatGPT, Grok) create and update typed boards over **MCP and REST** with live sync.
- Implemented **MCP OAuth 2.1** (PKCE, dynamic client registration, rotating refresh tokens) for Claude.ai and ChatGPT custom connectors.
- Secured with a single **SECURITY DEFINER write path**, **row-level security**, scoped hashed agent tokens, and optimistic concurrency for parallel agents.

ContextMesh - Measured Context Layer for Claude Code github.com/gajanansr/contextMesh

- Built a Claude Code context layer with local hooks and Tree-sitter: session memory and AST repo mapping across **7 languages**.
- Fixed **6 critical defects** and ran **153 benchmark runs over 7 datasets**, exposing an apparent **88% gain** caused entirely by cache-ordering effects.

Claimo - Automated Expense Reporting Platform github.com/gajanansr/claimo

- Built and monetized an expense platform with **24+ paying users** at Rs.149/month; automated **Uber and Rapido** receipt extraction (Gmail API) into reimbursement-ready PDF reports (**40+ reports** in 2 months).
