Education

Sinhgad College of Engineering, BE in Information Technology (GPA: 7.97/10) 2021 – 2025

Technical Skills

Languages: TypeScript, JavaScript, Java, SQL
Frameworks: Angular, Micro-frontends, Gridster, Node.js, Spring Boot, REST APIs, SSE
AI & Agentic: Claude Code, LLM Agents, MCP, Agent Tools, AI Workflows, Loops & Graphs
Data & Infrastructure: PostgreSQL, OpenSearch, Redis, MongoDB, DynamoDB, Supabase, Docker
Engineering: RBAC, Authentication, Caching, Performance Optimization, System Design, Git

Experience

Member of Technical Staff - 1, Aqueralabs April 2026 – Present

- **Owned end-to-end filter execution performance**, redesigning the ranking and execution pipeline to produce deterministic results; reduced manual/expression filter execution from **~1.5–2 minutes to <1 second** and Prompt-based filtering to **4–5 seconds**.
- **Built Ask Aquera from the ground up**, a chat-first analytics workspace with SSE-streamed agent responses, conversational dashboard generation, dynamic widget rendering, artifact previews, and persistent conversation-to-dashboard workflows.
- Designed and implemented **tenant-scoped RBAC** across **181 API routes and 31 MCP tools**, introducing resource-level permissions across 11 resources and 50 permission keys with shadow-mode enforcement for controlled production rollout.
- Architected and integrated **5 micro-frontends** into the application shell, extracting shared dashboard components and standardizing frontend architecture across Connections, Settings, Agent, MCP, and ETL workflows.
- Built core **schema and data-management infrastructure**, including OpenSearch synchronization, field-curation with human/LLM precedence, deterministic field ranking, alias handling, and safeguards preventing automated synchronization from overwriting curated metadata.

Associate Software Engineer, LTI Mindtree July 2025 – April 2026

- Designed and implemented **production backend services using Java and Spring Boot**, developing REST APIs, business logic, data-access workflows, and integration layers for enterprise applications.
- Built a **full-stack COE platform from the ground up**, architecting scalable backend services, structured learning workflows, and API-driven features while contributing across both Java/Spring Boot and React.
- Improved application maintainability by applying **modular service architecture, reusable components, validation, and clean API design**, reducing coupling and making new product capabilities easier to implement.
- Collaborated across development and delivery workflows, translating product requirements into **production-ready implementations**, debugging integration issues, and following enterprise engineering and code-quality practices.

Projects

ContextMesh - Measured Context Layer for Claude Code github.com/gajanansr/contextMesh

- Built a production context layer for Claude Code using local hooks and Tree-sitter, delivering session memory and AST-based repository mapping across **7 languages**.
- Identified and fixed **6 critical defects**, including Unicode offset corruption, cross-project data leakage affecting **86,899 AST nodes**, broken timeout handling, and macOS path-matching failures.
- Conducted **153 benchmark runs across 7 datasets**, rejecting **9 false results** and uncovering an apparent **88% performance gain** caused entirely by cache-ordering effects.
- Built a cache-aware measurement and delivery-verification harness for real Claude Code sessions, validating token-cost measurements and detecting cases where reported optimizations had not actually reached the model.

Claimo - Automated Expense Reporting Platform github.com/gajanansr/claimo

- Built and monetized an expense automation platform with **24+ paying users at Rs. 149/month (~Rs. 3.5K MRR)**, generating **40+ reimbursement reports** in 2 months.
- Automated receipt collection and expense extraction from **Uber and Rapido** emails using Gmail API, eliminating manual receipt sorting, categorization, and expense calculations.
- Engineered automated reimbursement-ready PDF reports with date filtering, receipt attachments, duplicate detection, expense aggregation, and report generation.
